Zipper – on 4-sided unit for clean out.

RAIL DOCK SHELTER

Perma Tech supplies only the highest quality cover fabrics available on the market today. Because the cover material is the most critical component in determining the useful life of a dock seal or shelter, we offer a full range of industrial fabrics. All of our fabrics are engineered and tested for abrasion resistance, tear resistance, weatherability, and flexibility.

Perma Tech's Rail Dock Shelter provides a weather protected enclosure between the rail car and dock door. In the extended position, spring tension holds the shelter firmly against the rail car for safe loading and unloading. A foam cube on the leading edge of the steel framework forms a seal against the rail car to ensure product protection, personnel safety, and reduced energy loss. The unit can then be retracted against the building, out of the way.
